RETURN RECEIPT REQUESTED

**Re: Heritage – WTI, Inc.
EPA ID No. OHD 98 613 541
Annual Certification**

In accordance with conditions III.A.4 and IV.A.1 of Heritage – WTI, Inc's (WTI) Federal Resource Conservation and Recovery Act (RCRA) Permit, WTI is submitting the annual certification required by the above-mentioned RCRA Permit conditions.

Permit condition III.A.1 reads as follow: “In accordance with 40 CFR § 264.1064(m), if equipment is subject to 40 CFR Part 264, Subpart BB and to regulations at 40 CFR Part 60, 61, or 63, the Permittee may elect to determine compliance with 40 CFR Part 264 Subpart BB either by documentation pursuant to 40 CFR § 264.1064 of this subpart, or by documentation of compliance with the regulations at 40 CFR Part 60, 61, or 63. The documentation of compliance under 40 CFR Part 60, 61, or 63 shall be kept with or made readily available with the facility operating record”.

Permit condition III.A.4 requires WTI to provide annually to the Director a certification describing the Permittee's election of compliance regarding condition III.A.1

In accordance with 40 CFR § 264.1064(m), WTI is electing to determine compliance with subpart BB by complying with 40 CFR Part 61—National Emission Standards for Hazardous Air Pollutants, subpart V. The equipment regulated by this subpart are pumps, valves, flanges, and connections. The list of equipment regulated by this subpart is included in Attachment A.

Permit condition IV.A.1 reads as follows “If a hazardous waste management unit is equipped with and operating air emission controls in accordance with the requirements of an applicable Clean Air Act regulation under 40 CFR Part 60, 61, or 63, you may elect to exempt the unit from overlapping regulation under Section IV of this permit (except as specified in this Section IV.A) if you provide a certification satisfying the requirements of 40 CFR § 264.1080(b)(7) that the hazardous waste management unit is equipped with and operating air emission controls in accordance with such requirements. Such certification must be renewed annually and shall specify the regulations under 40 CFR Part 60, 61, or 63 that require the air emission controls. (40 CFR § 264.1080(b)(7))”

WTI certifies that each of the following hazardous waste management units is equipped with and operating air emission controls in accordance with 40 CFR 61, subpart FF.

HAZARDOUS WASTE MANAGEMENT UNITS: TANKS

• **Organic Tank Farm (T-1 through T-18)**

The Organic Tank farm has a capacity of 288,000 gallons in a total of 18 aboveground waste storage tanks. All 18 tanks are located within a building. The Organic Tank Farm is used to receive, blend, and store bulk liquid and sludge. Tanks are equipped with level and temperature alarms, safety cut-offs, bypass systems, pressure and vacuum relief safety devices and inert gas blanketing. Each tank is equipped with a vent emission control system (closed-vent system) that collects vapors and conveys them to an emission control device (a combustion control device or a carbon adsorption control system). The closed-vent system and control devices are designed and operated in accordance with 40 CFR 61 Subpart FF. Below is a table that designates the regulation with which each of the Organic Tank Farm tanks complies.

T-1 (1220)	T-2 (1302)	T-3 (1385)	T-4 (1303)	T-5 (1301)	T-6 (1202)	T-7 (1201)
	T-8 (1105)	T-9 (1101)	T-10 (1212)	T-11 (1211)	T-12 (1216)	T-13 (1215)
	T-14 (1210)	T-15 (1207)	T-16 (1206)	T-17 (1205)	T-18 (1380)	

o Tank T-1 (1220)

T-1 is used to store fuel oil but is permitted to store hazardous waste. If T-1 stores hazardous waste, that hazardous waste will contain VOCs > 500 ppmw. This tank is regulated under 40 CFR 264 Subpart CC. T-1 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF which also complies with the requirements of 40 CFR 264 Subpart CC.

- o Tank T-2 (1302)

T-2 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-2 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-3 (1385)

T-3 is an overflow tank. This tank is regulated under 40 CFR 61 Subpart FF. T-3 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-4 (1303)

T-4 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-4 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-5 (1301)

T-5 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-5 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-6 (1202)

T-6 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-6 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-7 (1201)

T-7 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-7 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-8 (1105)

T-8 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-8 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-9 (1101)

T-9 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-9 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-10 (1212)

T-10 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-10 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-11 (1211)

T-11 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-11 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption cleaning system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-12 (1216)

T-12 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-12 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-13 (1215)

T-13 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-13 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-14 (1210)

T-14 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-14 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-15 (1207)

T-15 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-15 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-16 (1206)

T-16 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-16 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-17 (1205)

T-17 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. T-17 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Tank T-18 (1380)

T-18 is an overflow tank. This tank is regulated under 40 CFR 61 Subpart FF. T-18 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- **Feed Building - Bulk Solid Waste Tanks (S-1 and S-2)**

The Bulk Solid Waste Storage Tanks consists of two reinforced concrete tanks located inside the Incinerator Feed Building. The units are open topped tanks separated by a center wall located inside a Permanent Enclosure. Bulk solid waste is unloaded from trucks into the tanks through doors located on the east side of the tanks. Vapors released from the wastes are collected by the vapor recovery vents in the tank area and conveyed to the vapor recovery system which transfers the vapors to a control device (an emission control device consisting of a combustion control device or a carbon adsorption control system).

40 CFR 264.1080(b)(7) states that an owner or operator is exempt from the requirements of 40 CFR 264 Subpart CC if the owner or operator certifies a hazardous waste management unit that is equipped with and operating air emission controls in accordance with the requirements of an applicable Clean Air Act regulation codified under 40 CFR part 60, part 61, or part 63. However, if a tank uses an enclosure to control air emissions as opposed to a cover, then the tank must comply with §264.1084(i), unless the tank meets the requirements provided in §264.1082(c)(5).

S-1 and S-2 meet the requirements of §264.1082(c)(5). Therefore, these tanks will be regulated under 40 CFR 61 Subpart FF.

- Pump-Out Tanks (PT-1 through PT-5)

Pump-Out Tanks (PT-1 through PT-5) are contained inside a building adjacent to the Container Processing Building. The Pump-Out Tanks are used to store liquid wastes pumped from containers in the Container Processing Building and from a specific processing area known as the Extruder. Tanks are equipped with level and temperature alarms, safety cut-offs, bypass systems, pressure and vacuum relief safety devices and inert gas blanketing. Each tank is equipped with a vent emission control system (closed-vent system) that collects vapors and conveys them to an emission control device (a combustion control device or a carbon adsorption

control system). The closed-vent system and control devices are designed and operated in accordance with 40 CFR 61 Subpart FF. Below is a table that designates the regulation with which each of the Pump-Out tanks complies.

Pump-Out Tank Regulation		
PT-1 (1231)	PT-2 (1232)	PT-3 (1233)
PT-4 (1102)	PT-5 (0660)	PT-6 (1304)

- o Pump-Out Tank PT-1 (1231)

PT-1 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. PT-1 is vented to the facility's vapor recovery system (closed vent system that collects vapors and transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Pump-Out Tank PT-2 (1232)

PT-2 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. PT-2 is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Pump-Out Tank PT-3 (1233)

PT-3 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. PT-3 is vented to the facility's vapor recovery system (closed vent system that collects vapors and transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Pump-Out Tank PT-4 (1102)

PT-4 is used to store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. PT-4 is vented to the facility's vapor recovery system (closed vent system that collects vapors and transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- o Pump-Out Tank PT-5 (0660)

PT-5 is an overflow tank. This tank is regulated under 40 CFR 61 Subpart FF. PT-5 is vented to a closed-vent system (WTI's vapor recovery) that is vented to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF

- o Pump-Out Tank PT-6 (1305)

PT-6 is a tank located on the first floor of the Container Process Building's west Side, directly beneath the Extruder Unit. PT-6 is constructed of carbon steel that collects the liquid and semi-solids removed from containers by the Extruder unit. PT-6 then transfers the contents to PT-4 (mentioned earlier). PT-6 is used to temporarily store hazardous waste that contains Benzene regulated under 40 CFR 61 Subpart FF and VOCs > 500 ppmw. This tank is regulated under 40 CFR 61 Subpart FF. PT-6 is vented to the facility's vapor recovery system (closed vent system that collects vapors and transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF

- o Process Water Storage Tanks (W-6, W-7, and W-8)

Process Water Storage Tanks W-6, W-7, and W-8 are located at the northeast corner of the facility. W-6 and W-7 are used to store water removed from the facility's Four Stage Wet Scrubber. W-8 is an overflow tank for W-6 and W-7. There are occasions when the process water in the Four Stage Wet Scrubber must be removed from the unit. During these times, the water is pumped to W-6 and W-7. When operations resume, the water may be pumped back to the Four Stage Wet Scrubber, disposed of through incineration at WTI, or transported off-site to a permitted facility. These tanks will not contain Benzene regulated waste or waste

that contain VOCs > 500 ppmw. Therefore, these tanks are exempt from 40 CFR 264 Subpart CC and 40 CFR 61 Subpart FF.

- Process Water Holding Tanks (W-4 and W-5)

Process Water Holding Tanks W-4 and W-5 are located at the northeast corner of the facility. These tanks are used to store run-on and run-off that has been collected in process areas at the facility. This water may be used in various processes at the facility, disposed of through incineration at WTI, or transported off-site to a permitted facility. These tanks will not contain Benzene regulated waste or waste that contain VOCs > 500 ppmw. Therefore, these tanks are exempt from 40 CFR 264 Subpart CC and 40 CFR 61 Subpart FF.

- Rapid Sand Filter Tank (W-9)

The Rapid Sand Filter Tank (W-9) is located at the northeast corner of the facility and is constructed of carbon steel. W-9 is used, when necessary, to filter water transferred from W-5 to W-4. This tank will not contain Benzene regulated waste or waste that contain VOCs > 500 ppmw. Therefore, this tank is exempt from 40 CFR 264 Subpart CC and 40 CFR 61 Subpart FF.

- Carbon Filter Tank (W-10)

The Carbon Filter Tank (W-10) is located at the northeast corner of the facility and is constructed of carbon steel. W-10 is used, when necessary, to filter water transferred from W-5 to W-4. This tank will not contain Benzene regulated waste or waste that contain VOCs > 500 ppmw. Therefore, this tank is exempt from 40 CFR 264 Subpart CC and 40 CFR 61 Subpart FF.

- Laboratory Waste Tank (L-1)

The Laboratory Waste Tank (L-1) is located in a concrete vault on the south side of the Administration Building and is constructed of fiberglass reinforced plastic. L-1 is used to collect rinsewaters from the cleaning/rinsing of laboratory glassware and equipment. These tanks will not contain Benzene regulated waste or waste that contain VOCs > 500 ppmw. Therefore, these tanks are exempt from 40 CFR 264 Subpart CC and 40 CFR 61 Subpart FF.

HAZARDOUS WASTE MANAGEMENT UNITS: CONTAINERS

- **Processing Activities**

Most processing activities occur in buildings that are equipped with vapor recovery. The fugitive emissions that may be generated during processing activities are transferred to the facility's vapor recovery system (closed vent system which transfers the captured vapors to an emission control device consisting of a combustion control device or a carbon adsorption control system). The closed-vent system and the control devices are operated in accordance with 40 CFR 61 Subpart FF.

- **Storage**

Containers stored in the Drum Warehouse utilize a cover and/or closure device to comply with 40 CFR 61 Subpart FF. These containers are visually inspected prior to be placing in the Drum Warehouse. Containers > 121 gallons are monitored for fugitive emissions prior to being placed into storage. It should be noted that not all containers received at the WTI facility will contain Benzene regulated waste. Because the requirements for containers under 40 CFR 61 Subpart FF are more stringent than the requirements under 40 CFR 264 Subpart CC, WTI complies with the requirements under 40 CFR 61 Subpart FF for all containers received at the facility.

- **Conclusion**

WTI will utilize the exemption in 40 CFR 264.1080(b)(7) and elect compliance with 40 CFR 61 Subpart FF for the following:

- Container Process Building
- Building A (Drum Warehouse)
- Building C (Lab Pack Building)
- Building B (External Truck Wash)
- Container Holding Building (Slag Canopy)
- Truck Holding Sampling Area

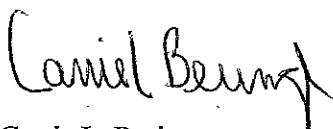

- **Vapor Recovery System (Closed-vent System)**

The Vapor Recovery System (VRS) serves to collect fugitive emissions and vapors from process and storage areas throughout the Facility. The air exhaust from this system supplies the Primary Air System with combustion air for the Kiln. When waste is not being fed to the Incineration System and combustion air is not required, the air/vapors are directed to the Carbon Adsorption Control System (carbon boxes). The boxes are capable of removing at least 95% of the total organic vapors from the air prior to discharge to the atmosphere. The VRS is designed and operated in accordance with 40 CFR 61 Subpart FF.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
